

Steps for installing Motorola Gold Flex pagong software.

This is old software and you will not be able to use the built in setup.exe file as it is build to install from a floppy drive A:\

1) create the following menus on your local hard drive C:

- A) C:\PF578FLX
- B) C:\PF578FLX\ARC

2) Using the winzip program that you have either installed on your computer or the build in winzip extraction for Windows XP, extract all files to the C:\PF578FLX folder that you created in step 1 above.

3) Go to the C:\PF578FLX folder and find the PF578FLX.FIL file and copy this to the root of the C drive (C:\)

4) Once the files are in their proper place on the local hard drive the program may be run with the PF578FLX.exe file.
