

AMERICAN MESSAGING OPTIONAL SERVICES

Descriptions

Group Call

There are several types of group calls available. The most common is called the Common Address Group Call which is defined as the same text or numeric message being distributed to a pre-established group of pagers, which can be managed by the customer with the use of equipment programmers. Group call can also be accomplished by American Messaging applying additional common cap codes to the pagers at the time of order fulfillment.

Voice Mail

Voice Mail enables the customer to personally greet those who call the pager and allows callers to leave personal voice messages in the pager's private mailbox. The pager then notifies the owner that a message is waiting.

Secondary / Toll Free Numbers

Secondary and Toll Free Numbers are perfect for distribution to clients or associates who are located nationwide.

Custom Greeting

Custom Greeting enables the pager owner to personally greet those who call the pager. The greeting message can be updated as often as desired.

Operator Dispatch

Operator Dispatch is a 24/7 live operator answered dispatch service that will send alphanumeric messages to the pager owner.

PageSaver™

PageSaver™ insures that pages are not missed if the pager is left at home, leaves the coverage area, or if the battery runs down. With PagerSaver™ the owner

simply calls the pager number and retrieves the last 15 pages including the time and date the pages were sent.

Page Forwarding

Page Forwarding allows messages that are sent to your one way pager to be delivered to another pager.

Dispatch Software

Dispatch software is available as a convenient method to send messages from a personal computer.

PageCopy™

PageCopy™ allows customers to have message that are sent to their pager, to be copied to an unlimited number of addresses or devices such as email and SMS.

IntelliMessage® Mobile and Desktop

IntelliMessage® Mobile and Desktop is an enhancement to the paging experience. The IntelliMessage® application for smart devices and desktop delivers and intrusively displays critical messages on any PC, tablet or smartphone in seconds. Messages are intrusively received and displayed in an application separate from text and email.

Critical Messaging System

Critical Messaging System is our campus or in house based paging system. Critical messages stay off public networks which ensure fast throughput and consistent message delivery. Low cost and simple to deploy.
